

ABSTRACT

An emergency information storage container stores information which facilitates location by rescue personnel of regular building occupants in the event of an emergency situation, such as a fire or gas leak. The information may include the names of individuals or pets regularly occupying the building and the locations in the building which they regularly occupy. Floor plan information may be provided. The storage container is installed at the building. In the event of an emergency, rescue personnel open the container and use the information stored therein to facilitate rescue efforts. The storage container may be provided in a kit which includes instructions for preparing the emergency information, installing the storage container and storing the information in the container. A method for assisting rescue personnel is also provided.
